

## Enhance your pharmacy's image

### Make your brand stick with customized labels

As specialists in the pharmacy packaging industry, Jones has developed many new products to make your job easier. Not only was Jones the first printing company in Canada to manufacture laser labels for pharmacy, but we also designed the first dual web laser prescription label for the Canadian market.

Today, our labels are guaranteed to enhance your professional and clinical image and can create stronger brand identity and awareness for your pharmacy. We custom-print quality, multi-colour prescription and unit-dose labels on a variety of stocks for use with all software systems. We work closely with the leading laser printer manufacturers and software providers to ensure our labels incorporate their specifications and the requirements of the College of Pharmacists in each province.

All of our labels are manufactured at our London, Ontario facility where we also warehouse high-volume stock items to ensure quick order turnaround.

#### Laser labels

- High-quality dual web construction for clean execution
- Efficient throughput on laser printers
- High-volume manufacturing capacity

#### Dot matrix labels for use with standard printer
